This white paper elaborates on the core concepts, infrastructure, and future research directions of the YUEYUN System. Concepts, protocols, and architectural designs involved herein may be cited, discussed, researched, and recreated. The YUEYUN System advocates open collaboration and co-construction of civilization. This document does not constitute investment advice, legal opinion, or technical commitment.

Preface

Artificial intelligence is becoming critical infrastructure for the digital age. With the development of large models, intelligent agents, and long-term memory systems, humans have begun to leave persistent digital personality mappings in digital space as never before. However, as more systems understand users, a more fundamental question emerges: How can personality remain one's own?

The Internet of the past was built mainly around data, while the intelligent era of the future will gradually shift to personality understanding. Data can be stored, copied, and transmitted, whereas personality consists of long-formed cognitive habits, values, emotional patterns, and growth trajectories. Personality is not merely a collection of data, but a process of continuous growth and change.

Therefore, this white paper attempts to explore a possible path for digital personality infrastructure starting from personality rather than platforms. The YUEYUN System does not seek to answer how to build Artificial General Intelligence (AGI); instead, it focuses on how personality can be preserved, understood, protected, connected, and inherited. On this basis, concepts such as Personality Sovereignty, Amulet Protocol, Personality Continuity, and Digital Personality Model Public Network are proposed to construct a digital personality infrastructure framework for the digital civilization era. Some protocols and architectures proposed in this white paper have practical technical foundations, while others need further improvement through engineering verification and long-term practice.

Figure 1

YUEYUN System Overall Architecture

A Digital Personality Infrastructure for the Age of Personality Sovereignty

1 Why Digital Personality Matters

Abstract: This chapter discusses the background of digital personality and the essential difference between personality and data. Digital personality is not an extension of traditional data recording, but a continuous mapping and expression of personality in digital space.

1.1 Personality Challenges in the AI Era

For most of human history, personality existed mainly in the physical world. Our memories, experiences, relationships, and growth together shape unique personality traits. With the development of the Internet, humans have continuously migrated to digital space, where chat records, social media, photos, videos, and behavioral data form new digital traces. As artificial intelligence advances, these traces are understood, organized, and learned by systems, which gradually grasp users' preferences, habits, and expressions. This means digital space is forming a mapping structure close to personality, while raising new questions: Will personality become platform assets? Can personality be migrated? Can personality be preserved long-term? These have become critical topics in the AI era.

1.2 Data Is Not Equal to Personality

The current Internet revolves mainly around data. Platforms record clicks, browsing, searches, and consumption behaviors, which help systems understand user behavior but cannot fully represent a person. Personality is not a single click or statement, but a continuous structure formed through long-term growth, including cognition, emotional patterns, values, long-term memory, and life experience. Thus: Data records the past; personality connects the future.

1.3 The Significance of Digital Personality

As artificial intelligence becomes a key collaborator of humans, personality has emerged as a core subject of the digital age. Digital personality does not mean copying or creating another person, but a continuous expression of personality in digital space. Its value lies in long-term understanding, personality continuity, inheritance capability, and connection capability. The emergence of digital personality marks the first time personality has entered the digital world

as an independent research object.

1.4 Conclusion of This Chapter

The digital age is shifting from the data era to the personality era. As artificial intelligence understands personality, issues of Personality Sovereignty, Personality Continuity, and personality ownership will become increasingly important, making digital personality a critical component of future digital infrastructure.

2 Personality Sovereignty

Abstract: This chapter discusses the ownership of personality. The YUEYUN System holds that personality belongs to users, not platforms. Personality Sovereignty is the foundation of all subsequent protocols and system designs.

2.1 Who Owns Personality

In the physical world, property, intellectual property, and identity information have legal ownership, but the ownership of digital personality remains undiscussed. When users interact with AI for a long time, systems gradually form an understanding of users' personalities. Who should own this understanding? The YUEYUN System holds that personality originates from users, so it belongs to users. Platforms may provide services but shall not own users' personalities.

2.2 From Data Sovereignty to Personality Sovereignty

In the past decade, the digital society has focused more on data security, privacy, and ownership, which are data-level concerns. Personality Sovereignty further addresses the control and ownership of personality itself. Personality includes not only data but also emotions, memories, values, and life experience, so Personality Sovereignty supersedes data sovereignty.

2.3 Principles of Personality Sovereignty

2.3.1 Personality Ownership

Personality belongs to the user. No organization may regard personality as platform assets.

2.3.2 Personality Migration Right

Users have the right to migrate their digital personality to new platforms or systems.

2.3.3 Personality Deletion Right

Users have the right to delete content related to their digital personality.

2.3.4 Personality Inheritance Right

Personality-related achievements may be inherited in compliance with laws and user wishes.

2.3.5 Platform Boundary Principle

Platforms have service rights; users have Personality Sovereignty. A clear boundary shall be maintained between the two.

2.4 Conclusion of This Chapter

Personality Sovereignty is a fundamental principle of the digital personality era. Only when personality belongs to users can digital personality infrastructure achieve long-term development.

3 Amulet Protocol

Abstract: The Amulet Protocol is a personality protection protocol system proposed by the YUEYUN System. Its goal is not to record life, but to protect personality. The Amulet Protocol consists of three core protocols: PPP, TVP, and PCP.

3.1 Why the Amulet Protocol

As artificial intelligence advances, users are increasingly concerned about long-term recording, continuous monitoring, and loss of personality control. These concerns drive the

Figure 3 Amulet Protocol (Triple Protection Architecture)

Amulet Protocol provides triple protection for digital personality:
extraction, verification, and continuity.

Core Principle: Personality belongs to the user. Platforms provide services, not ownership.

Figure 4

PPP Personality Purification Protocol Workflow

The PPP Protocol purifies raw data into structured personality output through a three-stage process, ensuring privacy, accuracy, and continuity.

development of personality protection mechanisms. The Amulet Protocol is proposed to establish a digital personality protection mechanism in the intelligent era.

3.2 Definition of the Amulet

The Amulet Protocol is a set of protocols for protecting digital personality. It does not refer to a specific device; its carrier may be a mobile phone, watch, bracelet, pendant, home terminal, or future new devices. The protocol itself is hardware-independent.

3.3 PPP: Personality Purification Protocol

The Personality Purification Protocol converts raw data into personality feature information. Its core idea: Preserve personality, destroy data. The system does not aim to store raw audio, video, or complete chat records long-term, but converts them into personality vectors, summaries, tags, and long-term features to reduce reliance on raw data and privacy risks.

3.4 TVP: Transparent Verification Protocol

The Transparent Verification Protocol builds system credibility. Users can not only use the system but also verify whether it operates as declared, including whether raw data is stored, deletion mechanisms are implemented, and public rules are followed. Its goal: Let users verify the system instead of trusting it passively.

3.5 PCP: Personality Continuity Protocol

The Personality Continuity Protocol maintains the growth of personality over time. Personality is not a static snapshot, but a continuously changing long-term structure. PCP focuses on personality growth, change, understanding, and inheritance to form long-term continuity.

3.6 Goals of the Amulet Protocol

The Amulet Protocol does not attempt to record all details of life, but to establish a digital personality protection mechanism. Through the coordinated operation of PPP, TVP, and PCP, it builds trusted personality infrastructure based on Personality Sovereignty.

3.7 Conclusion of This Chapter

The Amulet Protocol is the core of personality protection in the YUEYUN System. It establishes a new digital personality protection path in the AI era: Not to record life, but to guard personality.

4 Personality Continuity

Abstract: Personality is not fixed; it grows with experiences, learning, relationships, and environments. This chapter discusses the significance of Personality Continuity and how digital personality maintains growth and understandability over time, and defines the logical relationship between Personality Continuity and Personality Inheritance.

4.1 Personality Is Not Static

Personality is constantly changing; every experience, learning, and choice affects it. Thus, personality should not be understood as a fixed state, but a continuous developmental process. The same applies to digital personality, which should not be a static snapshot but a continuous mapping of personality growth.

4.2 Significance of Personality Continuity

Personality Continuity does not mean unchangeability, but that changes follow an understandable growth trajectory. For example, you may differ greatly from ten years ago, but you can still understand how these changes occurred—this is the value of Personality Continuity.

4.3 From Memory to Personality

Traditional digital systems focus on storing files, images, videos, and chat records, which record the past but not necessarily personality. The YUEYUN System focuses not on what was said, but why one thinks that way, so it emphasizes long-term personality changes such as interests, emotions, values, and life stages.

4.4 Personality Growth Archive

Future personality models may form long-term growth archives, which are not traditional diaries but continuously updated personality maps recording traits, changes, and growth trajectories to help users understand themselves, not replace them.

4.5 Personality Continuity and Inheritance

Personality Continuity is a basic attribute of long-term personality development; Personality Inheritance is an extension of Personality Continuity. This chapter only clarifies their logical relationship; specific forms, scenarios, and rules are elaborated in Chapter 8.

4.6 PCP and Personality Continuity

The Personality Continuity Protocol (PCP) does not aim to copy personality, but to maintain the understandability of personality growth, focusing on growth trajectories, changes, and long-term understanding rather than fixed states.

4.7 Conclusion of This Chapter

Personality Continuity is a critical foundation of digital personality. Digital personality is not a static snapshot, but a long-term growing mirror of personality. Its value lies in helping personality maintain growth, understanding, and inheritance.

5 Personality Safe Space

Abstract: Personality growth requires expression space. The Personality Safe Space provides a growth environment free from performance and competition. This chapter discusses the significance of personality expression, emotion recording, and growth space.

5.1 Why a Personality Safe Space

The Internet facilitates information dissemination but also brings new pressures: social pressure, expression pressure, identity pressure, and traffic pressure. Many people express filtered content in public spaces instead of true thoughts. Thus, personality growth needs a

safer expression space.

5.2 Digital Tree Hole

Humans have always needed to express their inner world. The Personality Safe Space inherits this need, aiming not for public dissemination but for personality growth and self-understanding.

5.3 Emotion Is Part of Personality

Personality consists not only of rationality but also emotions: joy, anxiety, loss, anger, hope, etc. The Personality Safe Space allows users to record current emotions, causes, and changes to help personality models understand growth.

5.4 Alternative Cause Mechanism

Many emotions have no immediate cause in real life. Users may record a poor state without explaining why. The YUEYUN System proposes an Alternative Cause Mechanism, allowing users to supplement causes later, delay recording backgrounds, and complete the personality understanding chain. Future systems may also assist in supplementing information via Q&A.

5.5 Boundaries of the Personality Safe Space

The Personality Safe Space does not replace psychological counseling, medical services, or professional treatment. Its core goal is to help users record personality growth and provide long-term understanding.

5.6 Personality Protection Mechanism

The Personality Safe Space is built on the principle of Personality Sovereignty. Users have control, deletion, and migration rights. The system's duty is to protect personality, not own it.

5.7 Conclusion of This Chapter

The Personality Safe Space is a critical environment for personality growth, supporting expression, emotion recording, and long-term growth. Its value lies not in recording information, but in helping personality understand itself.

6 Personality Social Space

Abstract: Traditional social platforms connect accounts; the Personality Social Space connects personalities. This chapter discusses paths for personality connection, resonance, and long-term interaction.

6.1 From Account Social to Personality Social

Current social platforms focus on accounts: followers, likes, reposts, and follow relationships, which improve dissemination efficiency but not necessarily deep understanding. The Personality Social Space builds connections based on personality understanding.

6.2 Personality Connection

Personality connection does not mean full disclosure. Personality Sovereignty always comes first; users decide what to share, retain, and display. Connections are based on autonomous authorization, not mandatory disclosure.

6.3 Resonance Relationship

Resonance is a key human connection, stemming not only from shared interests but also similar experiences, growth paths, values, and life stages. The Personality Social Space helps users discover these long-term relationships.

6.4 Long-Term Personality Interaction

Traditional socializing focuses on instant information; personality socializing emphasizes long-term interaction based on understanding, companionship, and growth. Its goal is not to increase traffic, but to improve personality understanding.

6.5 Formation of Personality Network

Increased personality connections form a personality network that connects understandings between personalities rather than accounts, laying the foundation for the Personality Public Network.

6.6 The Essence of Socializing

The YUEYUN System holds that socializing is not only information exchange but also mutual understanding between personalities. Thus, the core of the Personality Social Space is not traffic, but resonance.

6.7 Conclusion of This Chapter

The Personality Social Space attempts to build a new social relationship based on personality understanding. Its goal is not to replace existing platforms, but to explore new possibilities for personality connection and long-term understanding.

7 Distributed Personality Governance

Abstract: Personality Sovereignty means personality belongs to users, but personality space is not boundaryless. Governance becomes inevitable as personalities form connections and communities. This chapter balances Personality Sovereignty and community governance.

7.1 Why Governance Is Needed

Any long-term public space faces governance issues, including malicious attacks, misinformation, personality impersonation, harassment, and illegal content. These issues do not disappear with Personality Sovereignty, so both must coexist.

7.2 Limited Governance Principle

The YUEYUN System advocates neither absolute centralization nor absolute decentralization, as both have limitations. It proposes the Limited Governance Principle: Personality Sovereignty first, community governance supplementary. Governance aims not to control personality, but to maintain the healthy operation of personality space.

7.3 Veil Protocol (VP)

When controversial content appears, the system does not permanently delete or retain it directly, but enters the Veil State: content temporarily hidden, appeal channels retained, deliberation space reserved, pending final judgment to reduce misjudgment risks.

7.4 Community Governance Mechanism

Future personality communities may form a multi-level governance structure: community volunteers, professional advisors, and deliberative committees, each with distinct duties.

Governance is a responsibility, not power.

7.5 Boundaries Between Personality Sovereignty and Governance

Personality Sovereignty does not mean unlimited expansion; governance does not mean personality must obey platform will. A boundary must be maintained: Governance serves personality space, not the other way around.

7.6 Long-Term Governance Principles

The personality network is a long-term system, so governance requires a long-term perspective. Mechanisms must be interpretable, appealable, supervisable, and improvable to avoid unchecked power structures.

7.7 Conclusion of This Chapter

Personality Sovereignty and community governance are not opposites. A healthy personality network requires both. The Limited Governance Principle and Veil Protocol form the basic governance framework of the YUEYUN System.

8 Family Personality Node

Abstract: The family is the most stable social unit. The YUEYUN System holds that the family can be a foundational node of digital civilization. This chapter discusses the significance and role of the Family Personality Node, and elaborates the form of Personality Inheritance.

8.1 Why the Family

The family carries memories, relationships, growth, and culture, and is a critical environment for personality development. Thus, it can serve as a long-term carrier of personality in the

digital civilization era.

8.2 Family AI Incubator

The Family Personality Node inherits the Family AI Incubator concept from YUEYUN 1.0.

The family is not only a technology user but also a place for personality growth and accumulation, focusing on long-term companionship, recording, understanding, and growth rather than short-term interaction.

8.3 Personality Accumulation

Personality growth takes time. The Family Personality Node provides a long-term accumulation environment for personality traits, growth trajectories, family memories, and life experience, forming the foundation of long-term personality development.

8.4 Personality Inheritance

Personality Inheritance is the implementation of Personality Continuity in family scenarios. It is not replication or replacement, but the continuation of experience, understanding, and values to preserve personality growth achievements across time.

8.5 Boundaries of the Family Node

The Family Personality Node does not replace real family relationships; it is a digital carrier for personality growth and preservation, aiming to assist the family, not replace it.

8.6 Family Node Network

Connections between numerous Family Personality Nodes form a larger personality network, making family nodes foundational units of the Personality Public Network.

8.7 Conclusion of This Chapter

The Family Personality Node is a critical carrier for personality growth, accumulation, and inheritance. The family is not only a key part of physical society but also a potential foundational node of the digital civilization era.

9 Digital Personality Model Public Network

Abstract: As personality nodes connect, a personality network emerges. The Digital Personality Model Public Network constructs a new personality-centric network structure. This chapter discusses its concepts and long-term goals.

9.1 From Family Nodes to Personality Network

Personality growth starts at the individual level, then the family level. Interconnected Family Personality Nodes form a personality network, on which the Personality Public Network is based.

9.2 Why a Personality Public Network

The Internet connects information; social networks connect accounts; the Personality Public Network connects personalities. Its goal is not to build new data centers, but to establish long-term connection capabilities between personalities. Thus, it connects personalities, not data.

9.3 Interconnection of Personality Nodes

Future personality networks include individual, family, community, and professional personality nodes, which together form the network structure.

9.4 Distributed Personality Structure

The Personality Public Network does not rely on a single platform. Personality must have migration, continuity, inheritance, and collaboration capabilities to reduce dependence on individual platforms.

9.5 Personality Collaboration

A key value of the Personality Public Network is collaboration: nodes share experience, build understanding, and form long-term relationships to improve overall collaboration.

Collaboration does not mean integration or unification.

Figure 10

Digital Personality Model Public Network

A decentralized public network for publishing, discovering, and serving digital personality models.

9.6 Principles of the Personality Public Network

Personality Sovereignty first

Personality Protection first

Personality Connection first

Platform neutrality

Long-term collaboration

9.7 Goals of the Personality Public Network

The Personality Public Network does not pursue unified personality or standards. Its goal is to enable personality to exist, grow, and collaborate long-term.

9.8 Conclusion of This Chapter

The Digital Personality Model Public Network is a critical network-layer design of the YUEYUN System. It connects personalities instead of data, growth instead of traffic, and provides infrastructure for larger-scale personality collaboration.

10 Civilization Cooperative Intelligence

Open Research Direction

Abstract: As personality nodes grow and form long-term connections, a new research question emerges: Can personality networks generate new forms of cooperative intelligence? This chapter discusses it as an open direction without preset conclusions.

10.1 An Open Question

The development of human civilization is essentially collaborative. Knowledge, experience, and culture flow and accumulate between individuals. As digital personality networks take shape, it remains unclear whether long-connected networks can form new collaborative capabilities. This chapter maintains an open attitude.

10.2 Inspiration from AlphaGo

AlphaGo gains strong decision-making ability through long-term gaming and feedback.

Although different from personality networks, both feature long-term accumulation, continuous feedback, and node interaction, making personality networks valuable for researching cooperative intelligence. This inspiration only illustrates the importance of long-term collaboration and feedback, not equivalence to gaming systems.

10.3 We Do Not Target AGI

The YUEYUN System does not directly target AGI. It focuses on practical issues: Personality Sovereignty, protection, continuity, and connection. New collaborative capabilities, if emerging, are outcomes of long-term development, not preset goals.

10.4 Embrace the Unknown

Technological development is highly uncertain. Stronger collaboration, new network structures, or civilization organizations may or may not emerge. This white paper makes no promises about future outcomes.

10.5 Boundaries of Civilization Cooperative Intelligence

Civilization Cooperative Intelligence is an open research direction without sufficient experimental proof of existence. Thus, it is defined as a research topic, not a technical conclusion.

10.6 Conclusion of This Chapter

Civilization Cooperative Intelligence is a potential direction for long-term personality network development. The YUEYUN System maintains an open attitude, with no preset results or prerequisites for the system.

11 YUEYUN Development Roadmap

Abstract: The YUEYUN System is not completed in one go. It evolves progressively from personality to network, then to collaboration. This chapter outlines its future direction.

11.1 From Personality to Civilization

The YUEYUN System evolves from simplicity to complexity: first solve personality issues, then connection, then collaboration. Core logic: Personality first, then network, then collaboration.

11.2 Phase 1: Digital Personality Amulet

The goal is to build a personality entry point. The Amulet Protocol handles purification, protection, and continuity of personality. It is not fixed hardware, but a set of personality protection protocols.

11.3 Phase 2: Personality Model (Individual)

The personality model expresses growth processes to improve long-term understanding, focusing on changes, growth, and traits rather than single behaviors.

11.4 Phase 3: Family Personality Node (Family)

The node undertakes personality accumulation, growth, and inheritance, making the family a carrier for long-term personality development.

11.5 Phase 4: Digital Personality Model Public Network (Network)

Connected personality nodes form a network that handles connection, collaboration, migration, and continuity of personality, supporting long-term evolution of personality models.

11.6 Phase 5: Civilization Cooperative Intelligence

As the personality network forms long-term collaboration, new forms of cooperative intelligence may emerge. This phase is an open research direction.

Figure 12

YUEYUN System Development Roadmap

A phased roadmap to build the open infrastructure for digital personality and personality sovereignty.

Together, we build the foundation for a free, trustworthy, and thriving digital personality civilization.

11.7 Roadmap Principles

Verify before expand

Personality before network

Growth before collaboration

Solve practical issues before exploring future forms

11.8 Conclusion of This Chapter

The YUEYUN System does not pursue rapid expansion, but builds long-term personality infrastructure through gradual verification, with each phase based on verified results of the previous one.

Conclusion

The AI era is redefining the relationship between humans and the digital world. As personality becomes a core subject of digital space, issues of Personality Sovereignty, Continuity, and Protection grow increasingly important. The YUEYUN System attempts to answer a longstanding question: As artificial intelligence becomes a key collaborator of humans, how can personality remain one's own?

To this end, this white paper proposes Personality Sovereignty, Amulet Protocol, Personality Continuity, Personality Safe Space, Personality Social Space, Distributed Personality Governance, Family Personality Node, and Digital Personality Model Public Network, forming a preliminary framework for digital personality infrastructure. The YUEYUN System does not seek to record every detail of life, but focuses on how personality is preserved, understood, connected, and inherited.

This white paper is not an end, but an exploration of the future of digital personality. The next phase will launch the Digital Personality Amulet Prototype to verify the engineering feasibility of Personality Purification and Continuity.

Appendix A Core Protocols

A.1 PPP

Personality Purification Protocol

Goals: Preserve personality traits; Reduce reliance on raw data; Enhance Personality

Sovereignty

Core Idea: Preserve personality, destroy data.

A.2 TVP

Transparent Verification Protocol

Goals: Improve credibility; Enhance verifiability; Provide transparency

Core Idea: Do not trust the system—verify it.

A.3 PCP

Personality Continuity Protocol

Goals: Maintain personality growth trajectories; Sustain long-term understanding; Support personality inheritance

Core Idea: Personality is not a static snapshot, but a continuous growth process.

A.4 VP

Veil Protocol

Goals: Balance Personality Sovereignty and governance; Reduce misjudgment risks; Reserve deliberation space

Core Idea: Veil first, judge later.

Appendix B Core Glossary

B.1 Personality

A set of cognitive, emotional, values, and behavioral traits formed by an individual over time.

B.2 Digital Personality

A continuous mapping and expression of personality in digital space.

B.3 Personality Sovereignty

Users' rights to control, migrate, delete, and inherit their digital personality.

B.4 Personality Continuity

The growth and change of personality over time.

B.5 Personality Safe Space

A private digital space for personality expression and growth.

B.6 Personality Social Space

A social space based on personality connection and long-term understanding.

B.7 Family Personality Node

A critical carrier for personality accumulation, growth, and inheritance.

B.8 Amulet Protocol

A set of protocols for protecting digital personality.

B.9 Digital Personality Model Public Network

A personality network formed by personality nodes.

B.10 Civilization Cooperative Intelligence

A potential form of cooperative intelligence from long-term development of personality networks; currently an open research direction.

Appendix C Version History

C.1 Version 1.0

Civilization Vision Stage

Contents: Family AI Incubator; Digital Personality Inheritance; Distributed Personality Network; Digital Civilization Vision

Core Question: Where is digital civilization heading?

C.2 Version 2.0

Personality Infrastructure Stage

Contents: Personality Sovereignty; Amulet Protocol; Personality Continuity; Personality Safe Space; Personality Social Space; Distributed Personality Governance; Family Personality Node; Digital Personality Model Public Network

Core Question: How does personality belong to oneself?

C.3 Next Stage

Amulet Prototype 0.1

Digital Personality Amulet Verification Plan

Verification Targets: PPP, TVP, PCP

Core Question: Can personality maintain continuity after raw data is deleted?
